70 mln EUR
estimated annual turnover

Group mission

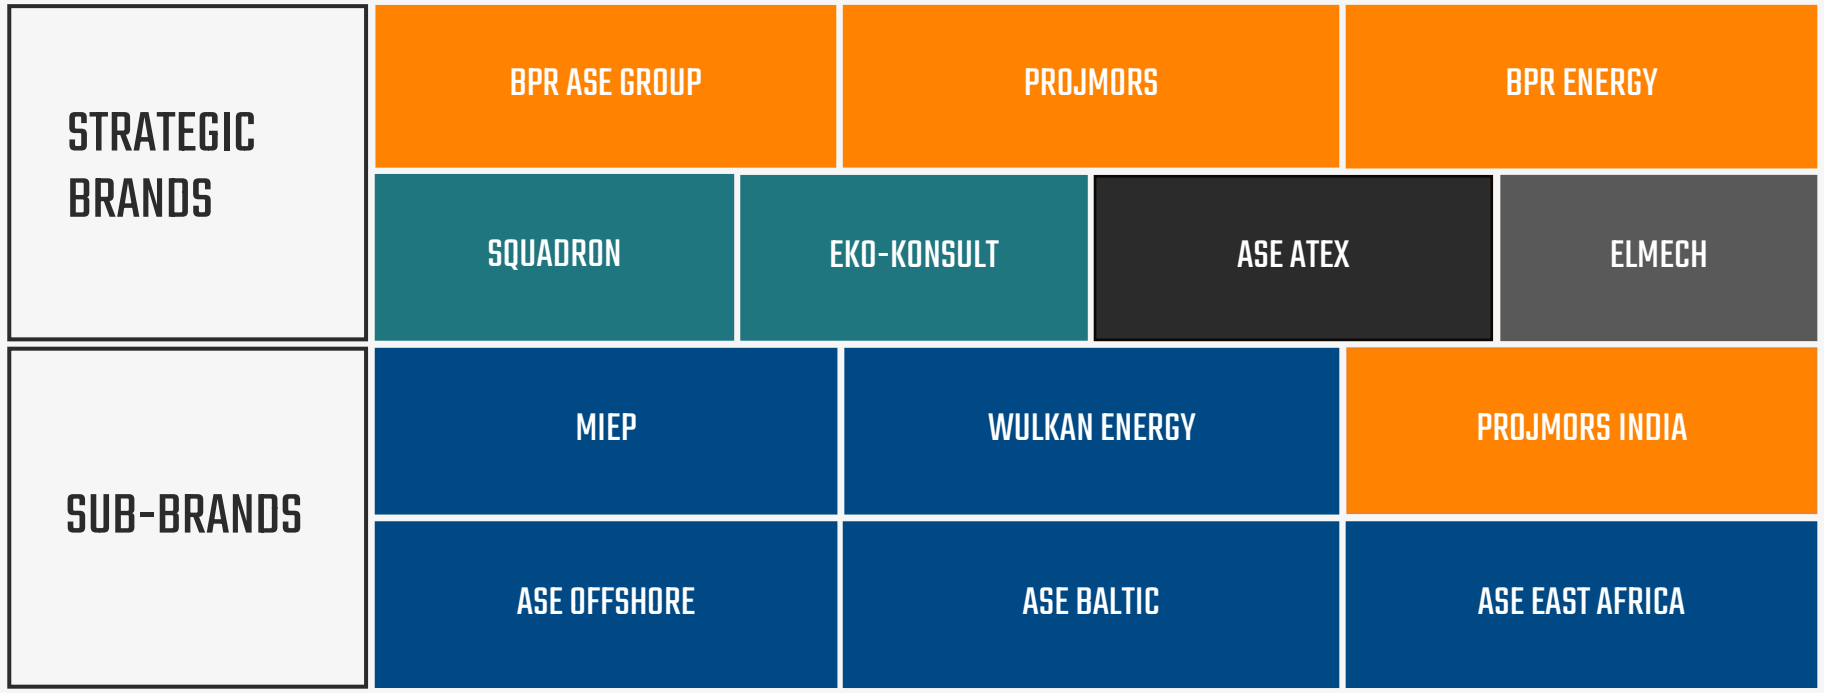
Our mission is **to provide safe technologies and solutions** for industry and economic infrastructure. Our many years of experience in the **OIL&GAS industry** provide a solid foundation for implementing this mission.

We operate in all important areas of energy transformation:

- Offshore wind farms
- Reducing emissions of heating
- Hydrogen
- Electrification of ports and adaptation to the electricity grid of the energy transformation
- Storage of electrical and thermal energy
- Nuclear energy technologies
- Modernization of the polish chemical, petrochemical and fuel industry

ISO 9001 CERTIFIED · ISO 14001 CERTIFIED · ISO 45001 CERTIFIED

Functional structure



400 engineers

- Engineering / EPC
- Consulting & training
- Service outsourcing

Glycol, Trzebinia

Hydrogen production installation

Design and construction of a turnkey propylene glycol (1.2-MPG) production plant from 99.5% distilled glycerin conversion with a capacity of 30,000 tons per year.

The project also includes Auxiliary Plants, such as a Glycerine Purification Plant, a Hydrogen Production Plant and additional infrastructure, which provides comprehensive support for efficient production.

> Innovative technology
> for sustainable production

Glycol, Trzebinia | Glycol installation

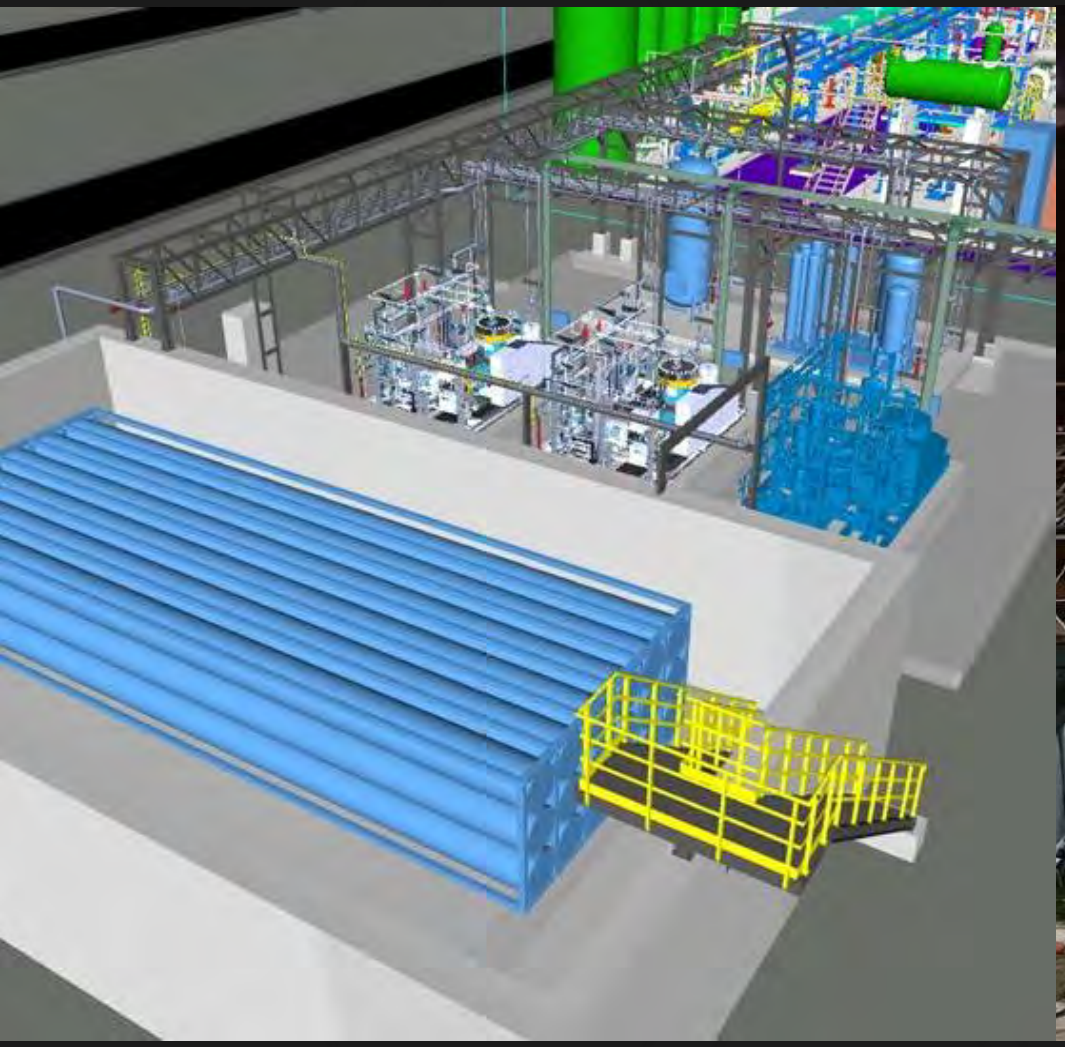
H2 PLANT Trzebinia & PSA+

Design, delivery and construction of a turnkey installation (EPC) for the production of propylene glycol together with auxiliary installations, i.e. Glycerine Treatment Plant, Hydrogen Production Plant, Sewage Treatment Plant and Additional Infrastructure.

> The first in Poland and the largest in Europe installation for the production of ecological propylene glycol

Production of 30 thousand tons of ecological glycol per year – as much as 10 thousand tons more than in the case of the only installation of this type in Europe, located in Belgium.

H2 PLANT Trzebinia & PSA+



HPU & CSD (PSA), Gdańsk

Design, delivery, and participation in the commissioning of the Hydrogen Purification Unit (HPU) and the purified hydrogen pipeline up to the CSD installation boundary in Gdańsk, as part of the "PURE H2" project.Scope of the project includes:

- Hydrogen purification station;
- Refueling infrastructure (CSD operation station) located in the municipality of Pruszcz Gdański;
- Pipelines for supplying purified hydrogen, as well as pipelines for potable water and sanitary sewage transmission.

HVO plant modeling

In response to the growing importance of renewable energy sources, our portfolio includes the modeling of vegetable oil and post-frying oil (UCO) hydrogenation plants. This process allows the production of a new generation of biofuels - diesel, aviation kerosene and so-called wild kerosene.

Main applications of hydrogen in enterprises

Automotive

Hydrogen co-combustion

Ammonia and methanol production

AUTOMOTIVE

We successfully implement projects for public and private clients in the field of hydrogen production for the refueling of buses, passenger cars and forklifts. Design and construction of an installation based on electrolysis technology, including compression, storage, and distribution systems;

- Design and construction of hydrogen purification installations to quality 5.0
- Design and construction of HRS stations (Hydrogen Refueling Stations).

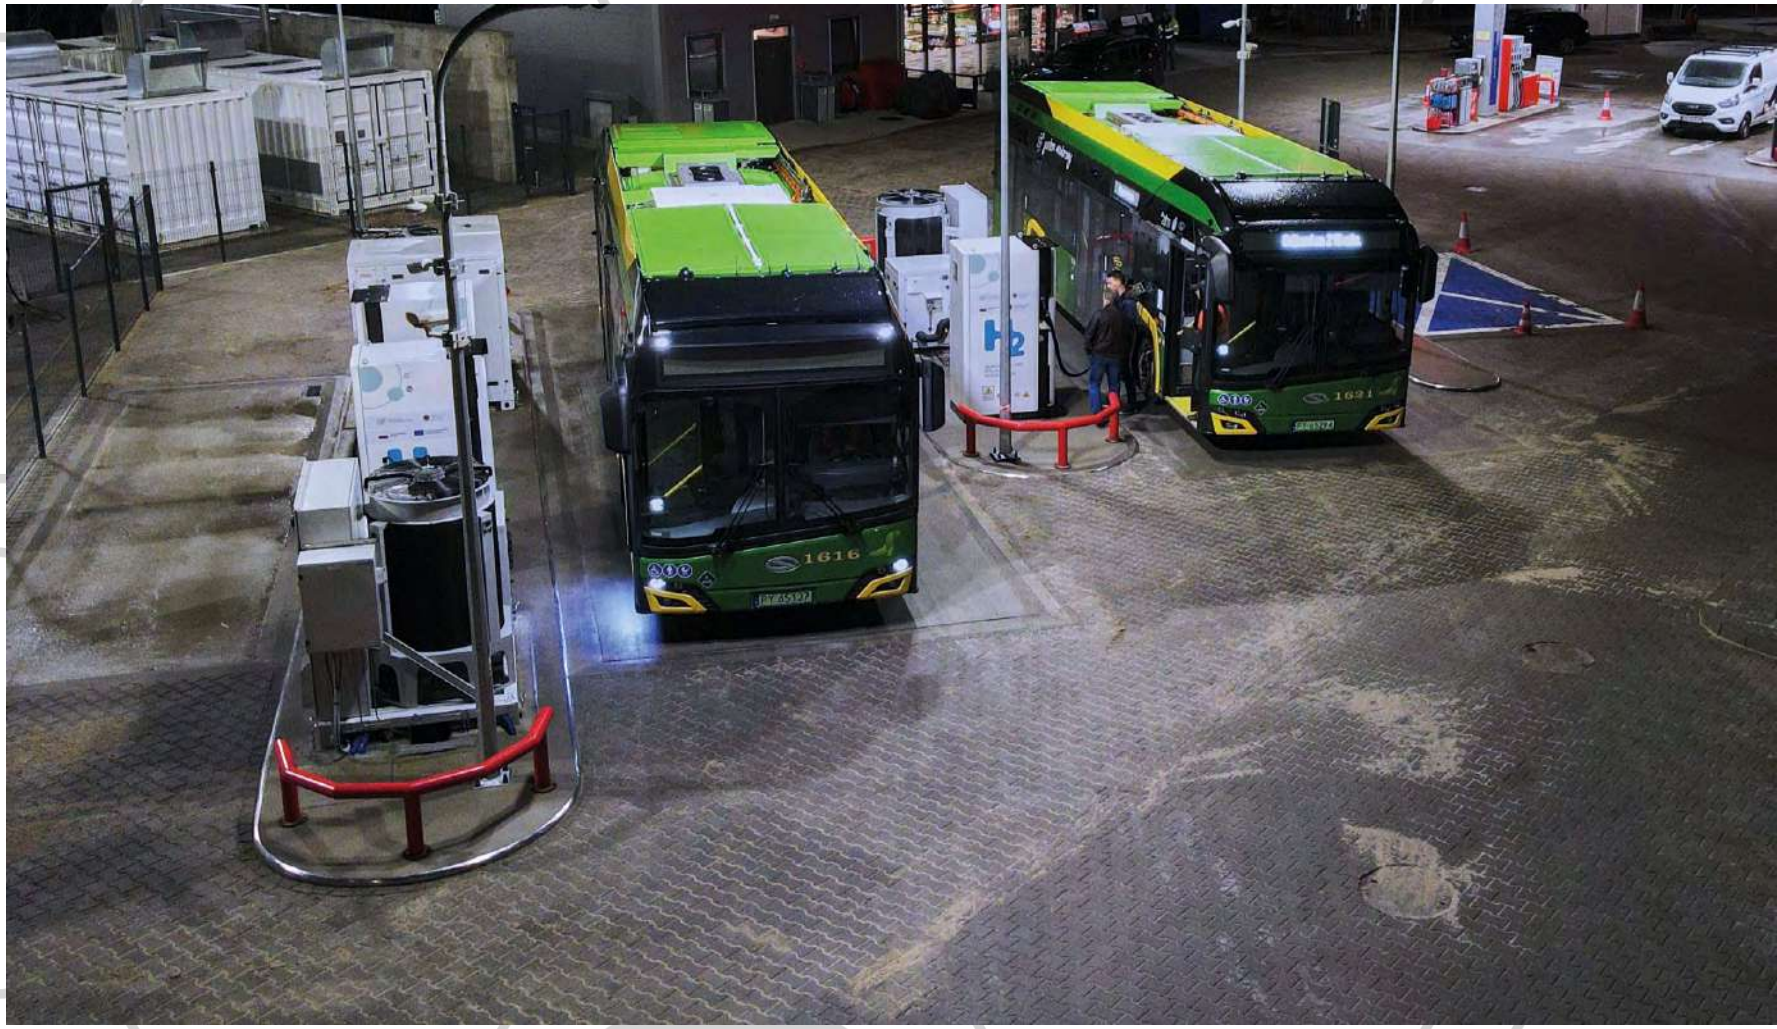
HRS Poznań & HRS Katowice

Two hydrogen refueling stations (HRS) for buses and passenger cars in Poznań and Katowice, including the delivery of battery-powered vehicles – EP project + supervision. Projects at the final stage of implementation (Poznań – test filling of buses that are already running around the city has begun; Katowice – preparation for technological start-ups).

In the project operation phase:

- Refueling of approximately 34 buses and 5 passenger cars per day in Poznań (demand of approximately 1050 kg of hydrogen/day);
- In Katowice, refueling of 20 buses and 5 passenger cars per day is planned (approx. 630 kg of hydrogen/day).

HRS Poznań & HRS Katowice

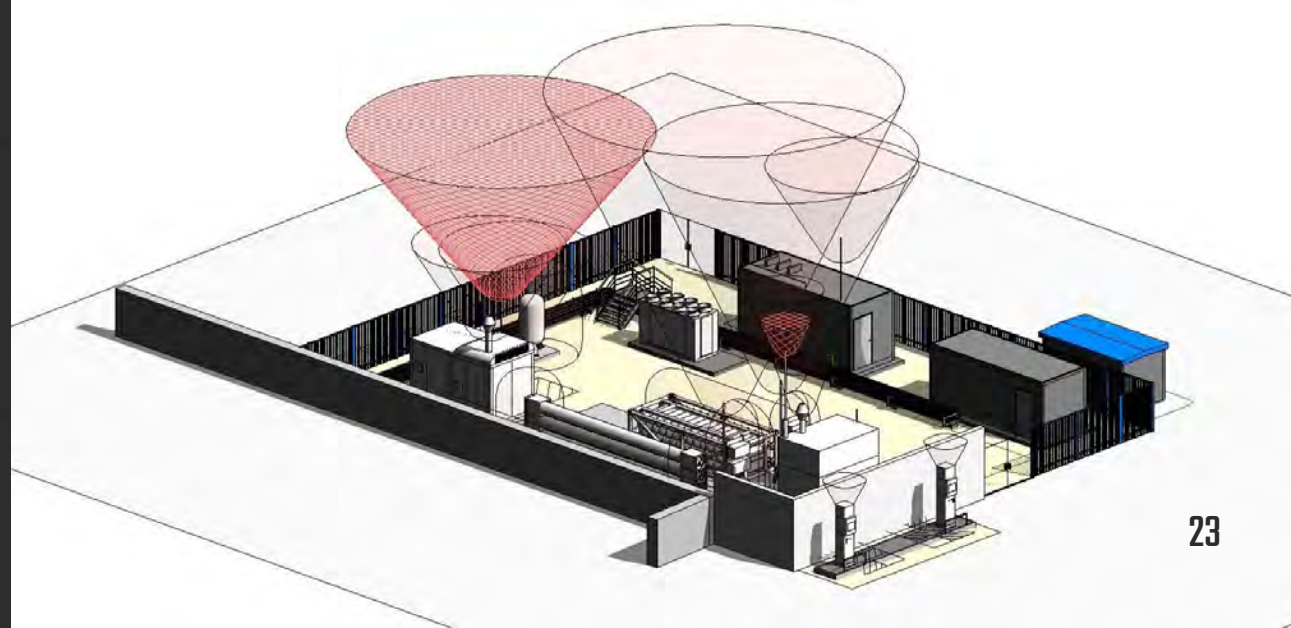


Solbet - Green Hydrogen Plant

Green hydrogen production facility based on electrolysis technology with compression, storage and distribution (passenger cars and forklifts) – EPC project for a private client - Solbet company. Commissioned in October 2023.

BPR ASE GROUP was responsible for:

- basic, executive and as-built designs
- completion and implementation of all deliveries necessary to complete the scope of the task
- carrying out construction and assembly works
- carrying out the start-up of the hydrogen production unit together with the refueling station for forklifts and passenger cars and participating in its start-up.



Solbet – Green Hydrogen Plant

WYTWÓRNIA
ZIELONEGO WODORU
SOLBET

Hydrogen co-combustion

We can both replace natural gas with hydrogen and create a mixture for co-combustion - thanks to this process we gain greater energy independence and reduce the carbon footprint of the company.

> The calorific value of hydrogen is more than twice that of natural gas in kWh/kg

Most steam boilers are adapted to co-combustion of up to 10-15% hydrogen in a mixture with natural gas, however there are also burners available on the market prepared for 100% cooperation with hydrogen.

Ammonia and methanol production

As BPR ASE GROUP, we cooperate with the largest suppliers of this technology in the world and we also conduct development projects with recognized companies to implement hydrogen in the production of ammonia and methanol.

Increase in Ammonia Demand

We are seeing a dynamic growth in interest in ammonia, especially in the energy and transport sectors. Thanks to its unique properties, ammonia is becoming the most cost-effective liquid energy carrier for long-term storage and transport on a global scale.

Benefits for Maritime Transport

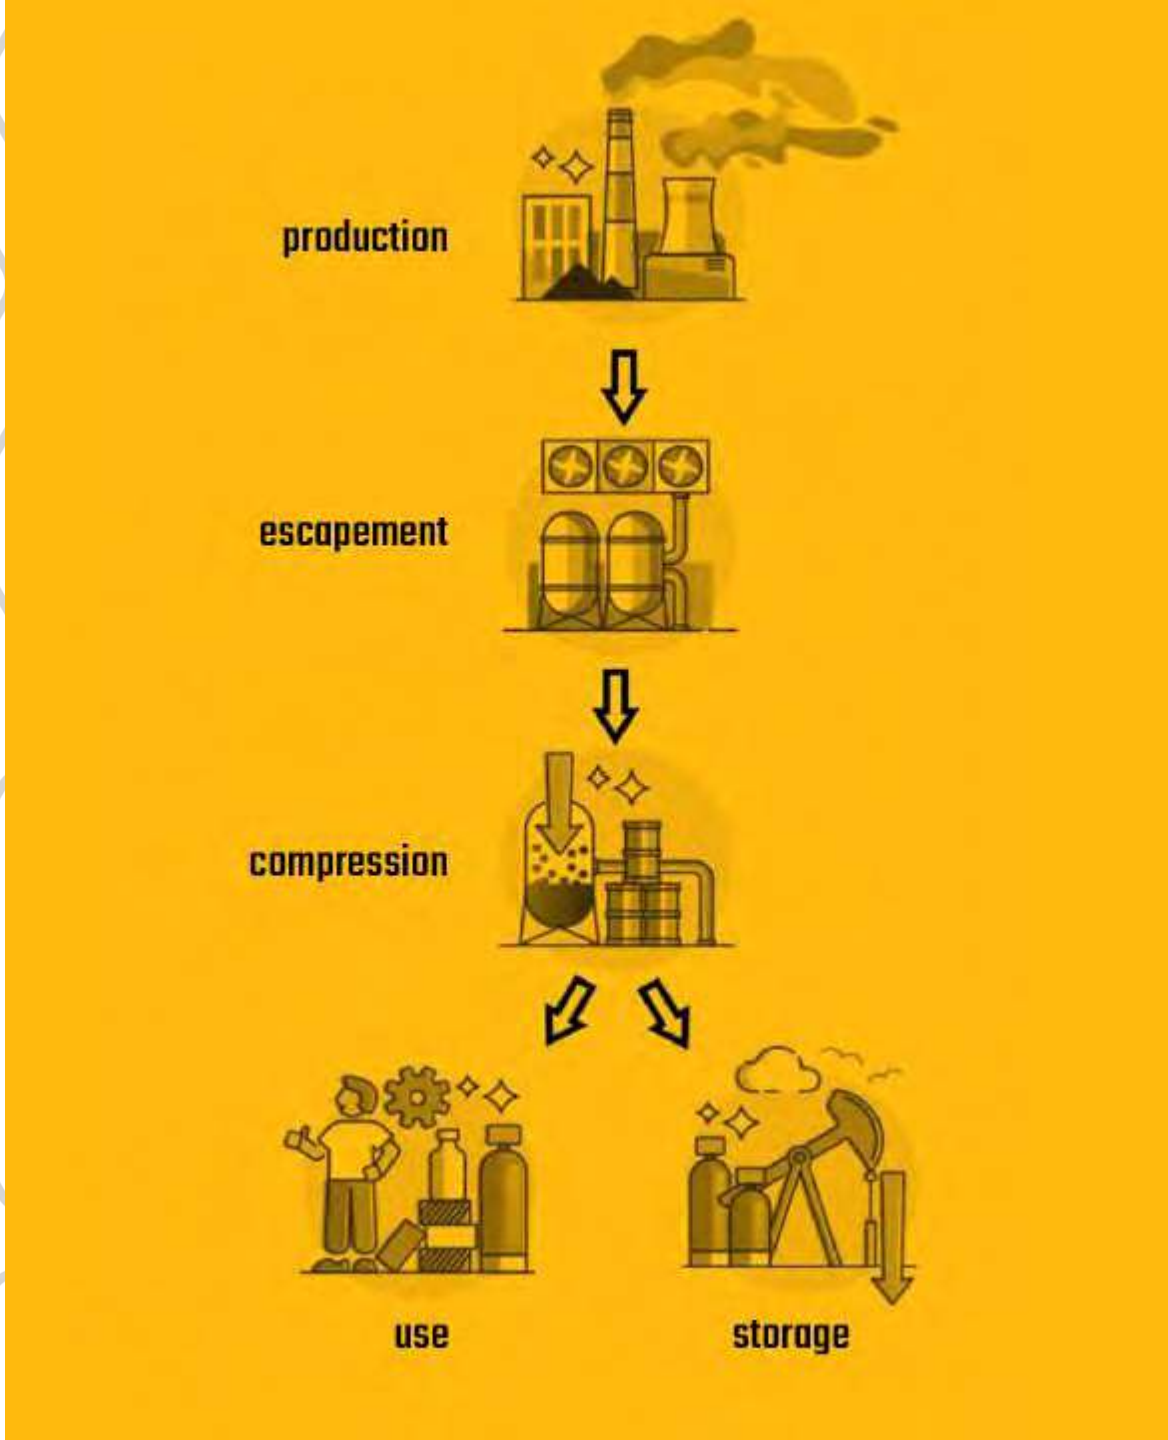
Ammonia, as an attractive alternative in maritime transport, offers sustainable solutions for **reducing emissions and improving** environmental performance. Due to its **ease of transport and storage**, it is an ideal candidate for the fuels of the future in green energy.

CO_2 capture

We are participating in the first CO_2 capture projects in Poland for the production of methanol based on green hydrogen, both on a pilot scale and in large-scale Feasibility Studies.

> CCS TECHNOLOGY (Carbon Capture and Storage) involves capturing CO_2 produced from the combustion of fossil fuels using various methods, liquefying it, transporting it to a storage site and injecting it into an isolated geological formation for permanent storage

On the other hand, there is CCU (Carbon Capture and Usage) technology, which involves storing or liquefying carbon dioxide, which allows it to be reused.



BPR ASE GROUP

High-temperature heat storage

Heat storage was originally created by combining CSP (Concentrated Solar Power) installed in countries with high temperatures.

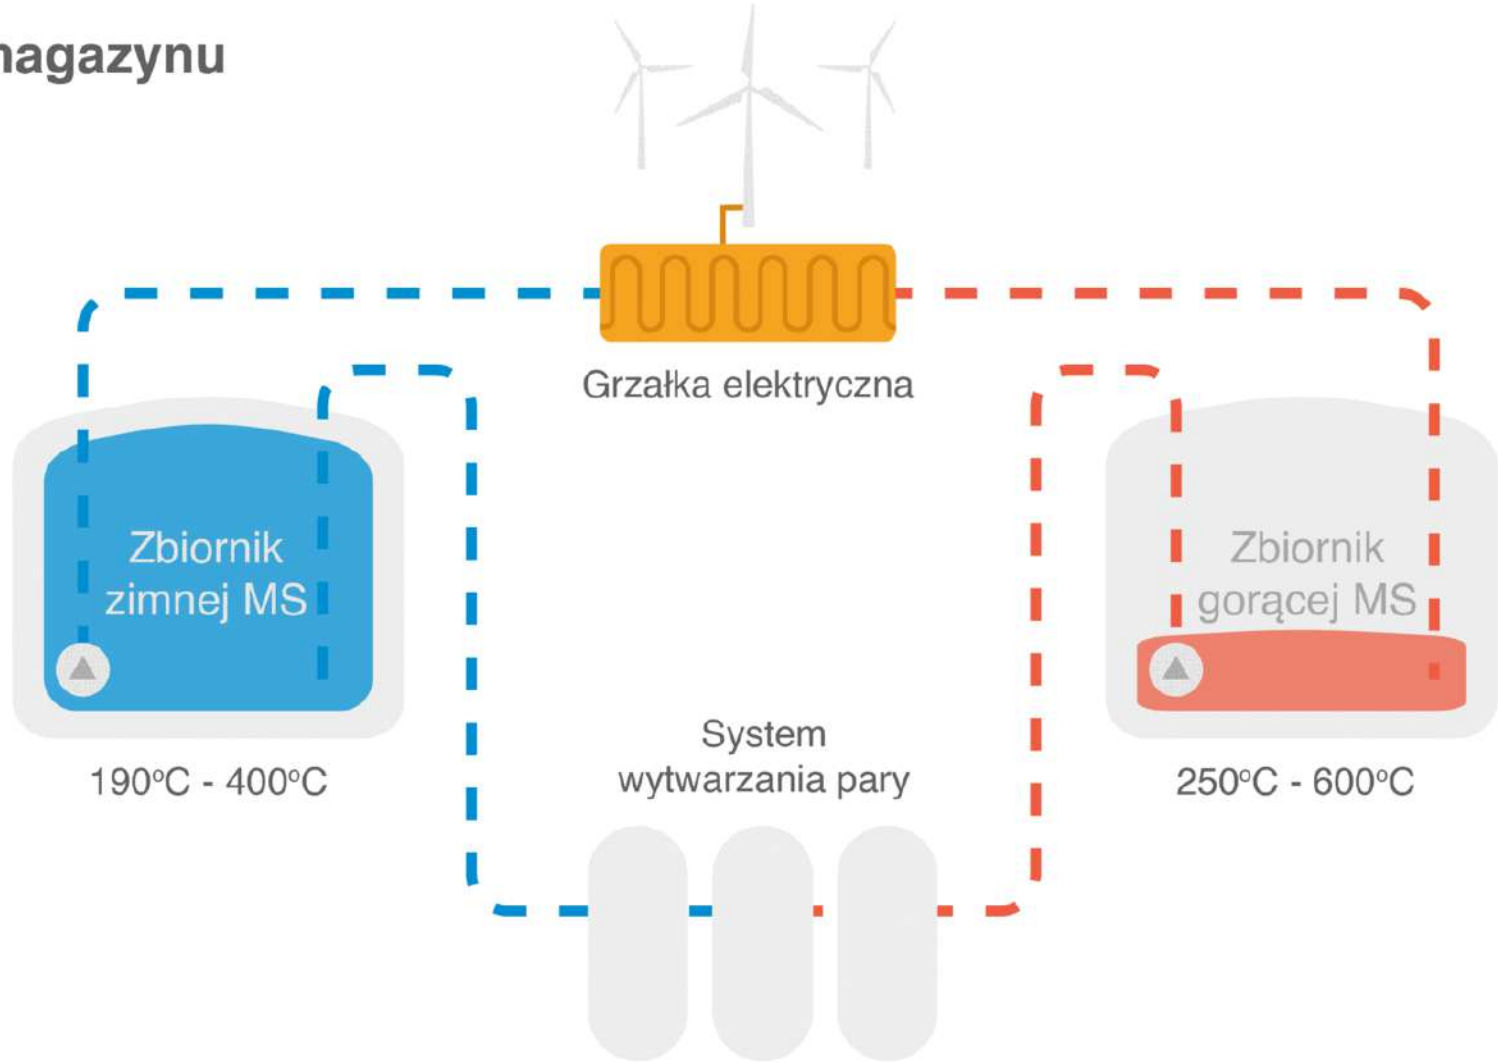
Currently, CSP are not necessary as salt storage, because they can be heated using a resistive electric heater.

Together with RPow Consulting, we participate in the implementation of concepts and feasibility studies for Polish entrepreneurs who want to invest in high-temperature heat storage (TES).

PARTNERSHIP WITH THE COMPANY:

RPOW CONSULTING

Ładowanie magazynu



TES Business Goal

In order for the TES to generate savings, it should be charged using cheap electricity, e.g. from own RES resources or during the available off-peak rate.

The TES is discharged when there is a demand for high-temperature heat, e.g. in the form of saturated or superheated steam.

The steam can be used for own needs, for sale, or to power a steam turbine to produce electricity.

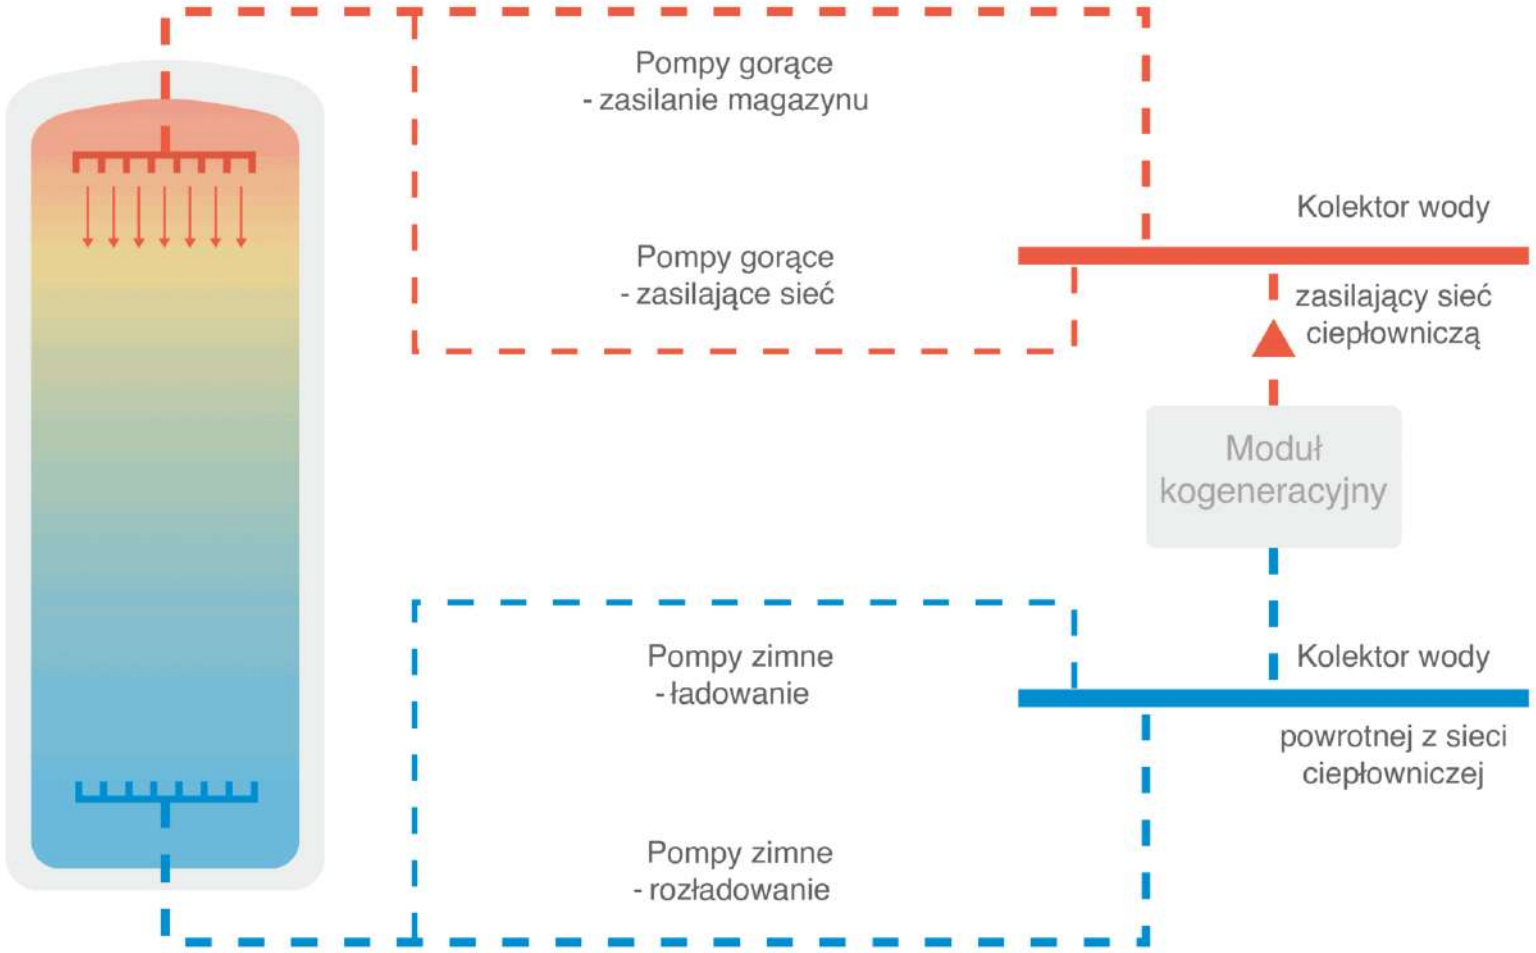
The TES installation can also be used to significantly accelerate the start-up of a steam turbine.

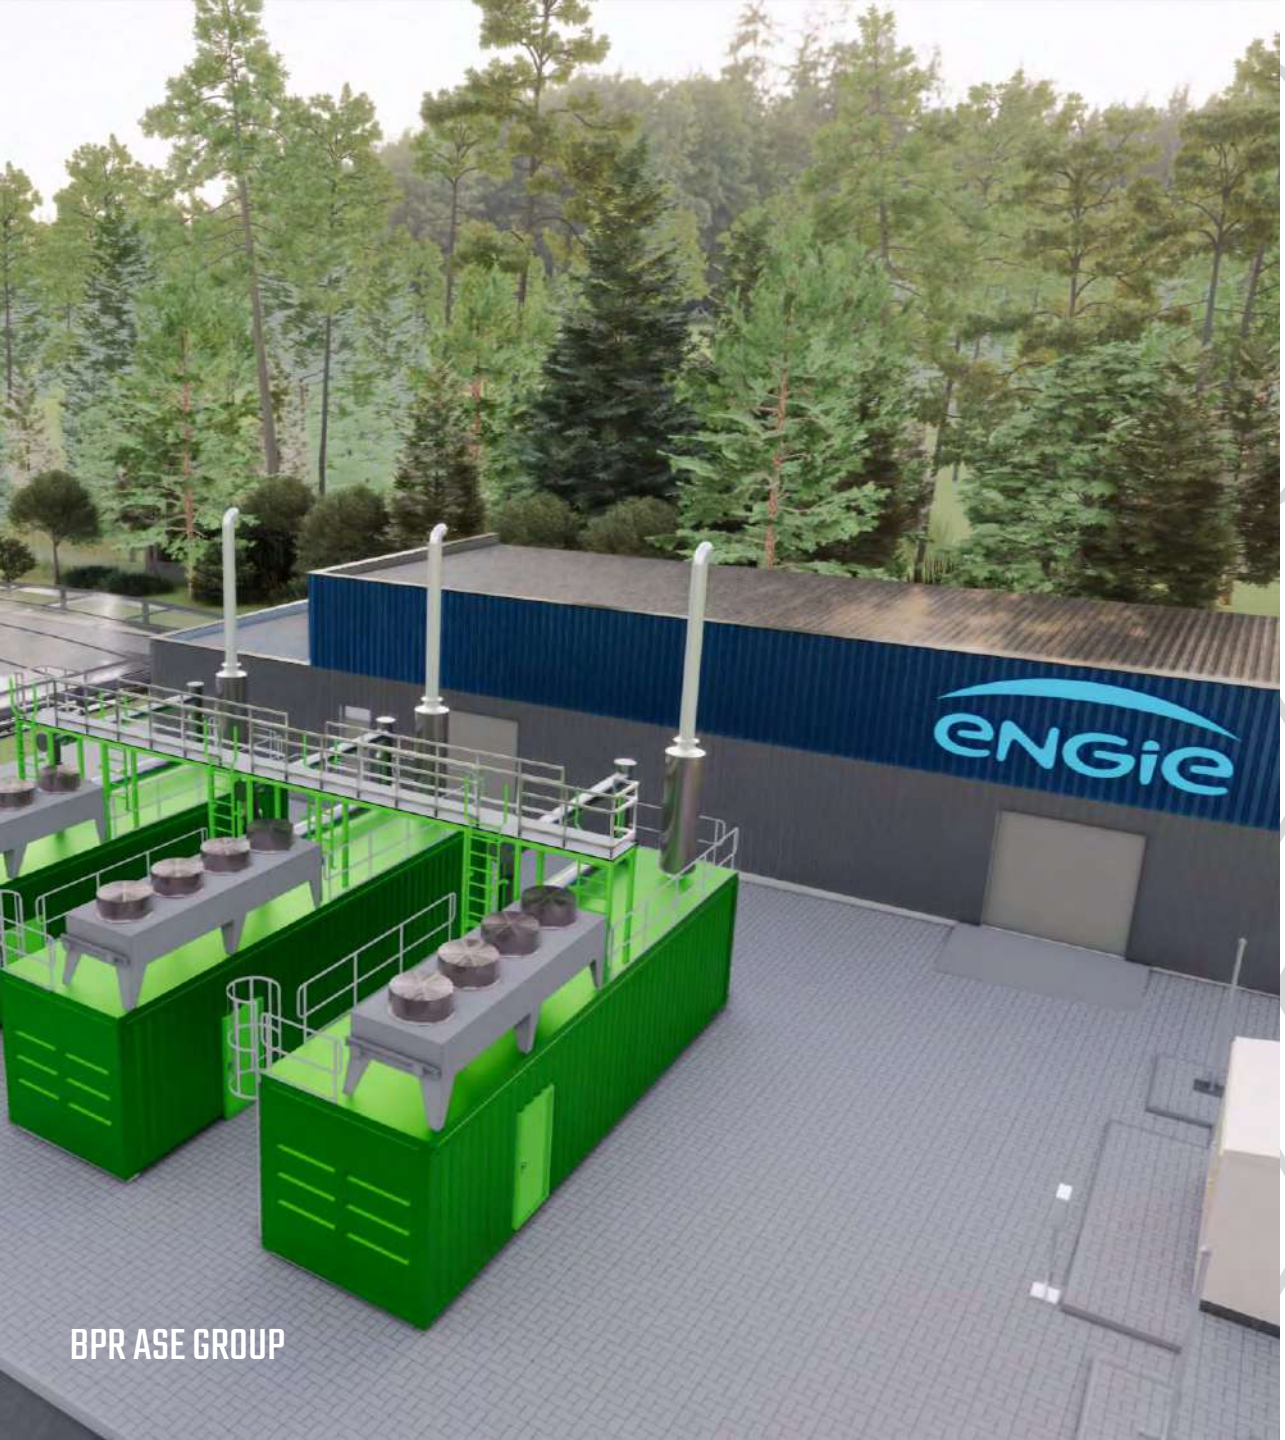
> The optimal use of the molten salt storage facility occurs when there is a significant demand for steam, or steam and electricity in a combined system

Heat pumps

- Integration of heat pumps with low-temperature storage (up to 98°C)
- Installation of high-power heat pumps in the MW range and with high temperature parameters (up to 200°C)
- Integration with existing heating installations, including heating networks
- Integration of heat pump installations with cogeneration units.

Ładowanie magazynu





BPR ASE GROUP

Project for ENGIE EC Słupsk

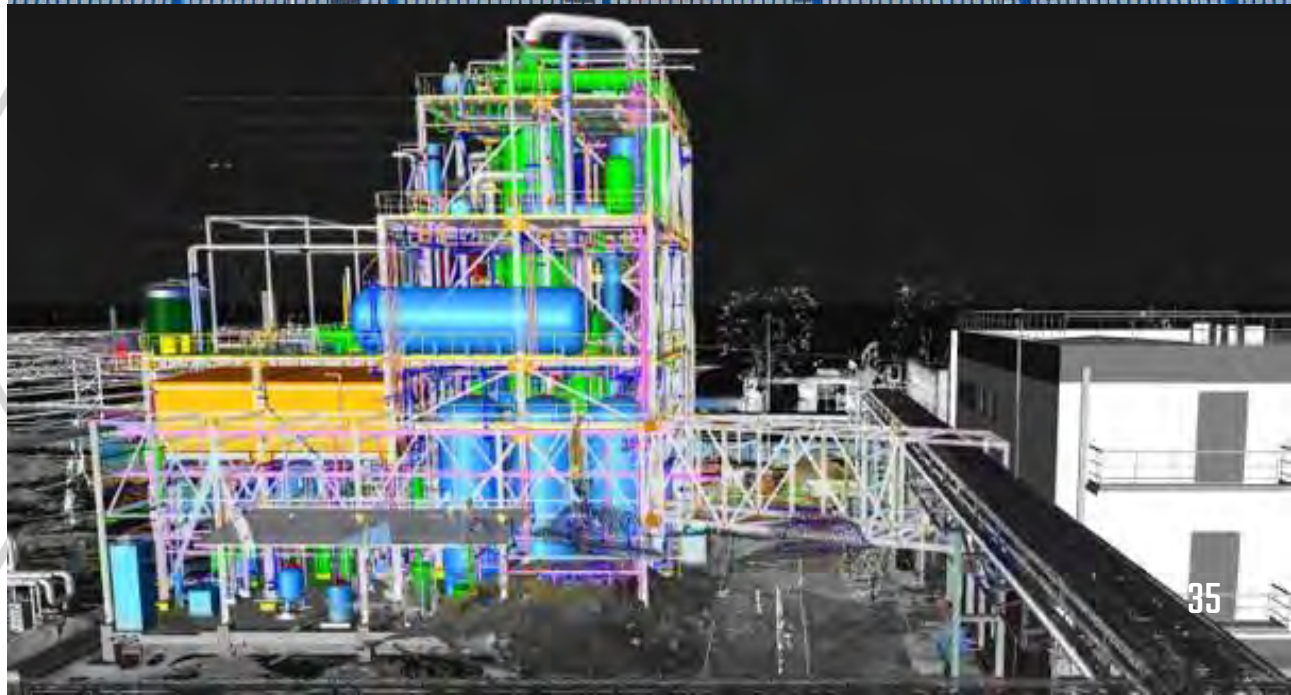
We are currently the General Contractor of an investment carried out for ENGIE EC Słupsk, consisting in the design and construction (EPC formula) of a heat pump with a capacity of approx. 7 MWt cooperating with three cogeneration engines, each with a capacity of 1 MWt.

> Currently, we have completed the basic designs, construction design and technical designs. At this moment, we are at the stage of obtaining a building permit decision

We design in BIM system

(Building Information Modeling)

BIM is a comprehensive information management in design. With a 3D model in the cloud, we provide control throughout the entire design cycle – from planning to construction and operation.



PROJMORS
ASE GROUP

PROJMORS ASE GROUP

We design a new reality

We specialize in technical consulting, investor supervision, project management and investments in hydrotechnical construction, including offshore wind energy.

77 years
experience and continuous operation

Over 325
completed projects in 2017-2024

63 permits
for construction in offshore areas 2019-2024

22 000

with many years of experience

PROJMORS

Main areas of activity

HYDROTECHNICAL OBJECTS

- Ports
- Terminals
- Quays
- Breakwaters

OFFSHORE WIND ENERGY

We are currently participating in all offshore wind farm projects in the Baltic Sea

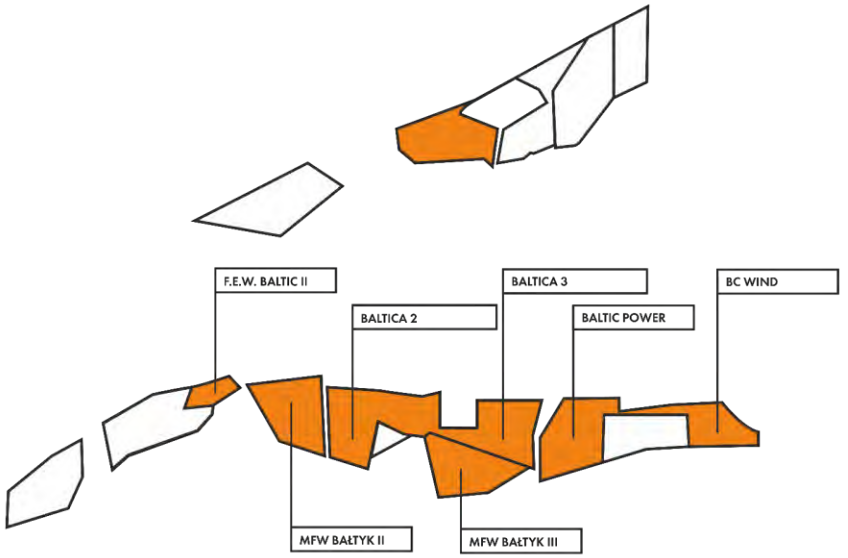
MILITARY FACILITIES

- Aircraft Maintenance Hangars
- Military Projects
- Headquarters Building
- Tank Garages

We are contributing to the development of Offshore Wind Energy

PROJMORS is the first project office in Poland to obtain construction permits for Offshore Wind Farms:

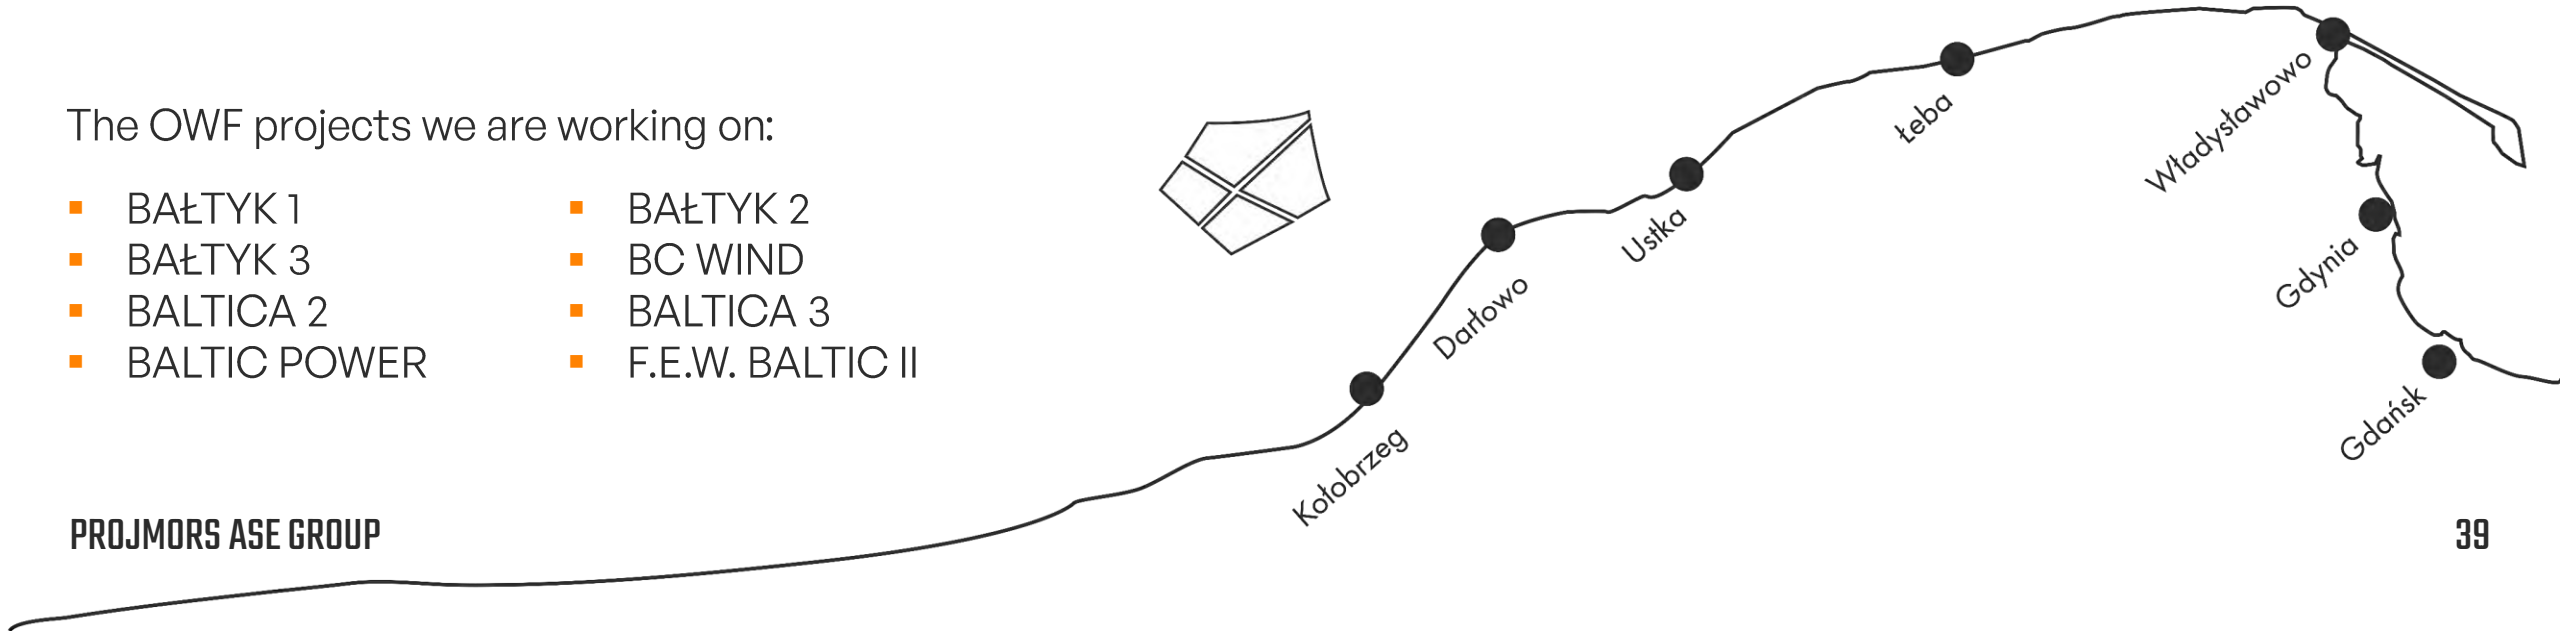
- **BALTIC POWER in 2023,**
- **BAŁTYK 2 in 2024,**
- **BAŁTYK 2 and BAŁTYK 3 in 2024.**



We are currently involved in eight offshore wind farm projects in the Baltic Sea, located between 20 and 80 kilometers from the coastline.

The OWF projects we are working on:

- BAŁTYK 1
- BAŁTYK 3
- BALTICA 2
- BALTIC POWER
- BAŁTYK 2
- BC WIND
- BALTICA 3
- F.E.W. BALTIC II



Market development - Polish Baltic and offshore wind farms

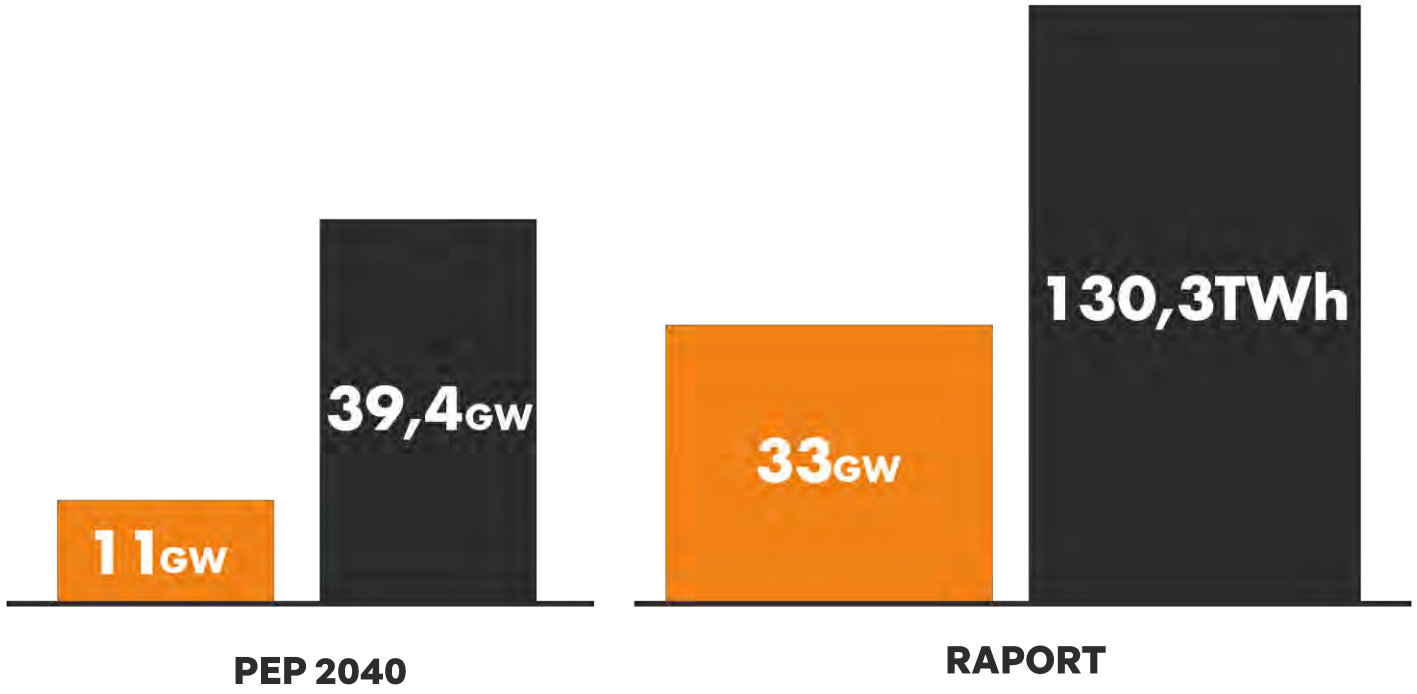
Current Areas - Phases I i II

15,3 GW **60,6 TWh**

New Areas - Phase III

17,7 GW **70,7 TWh**

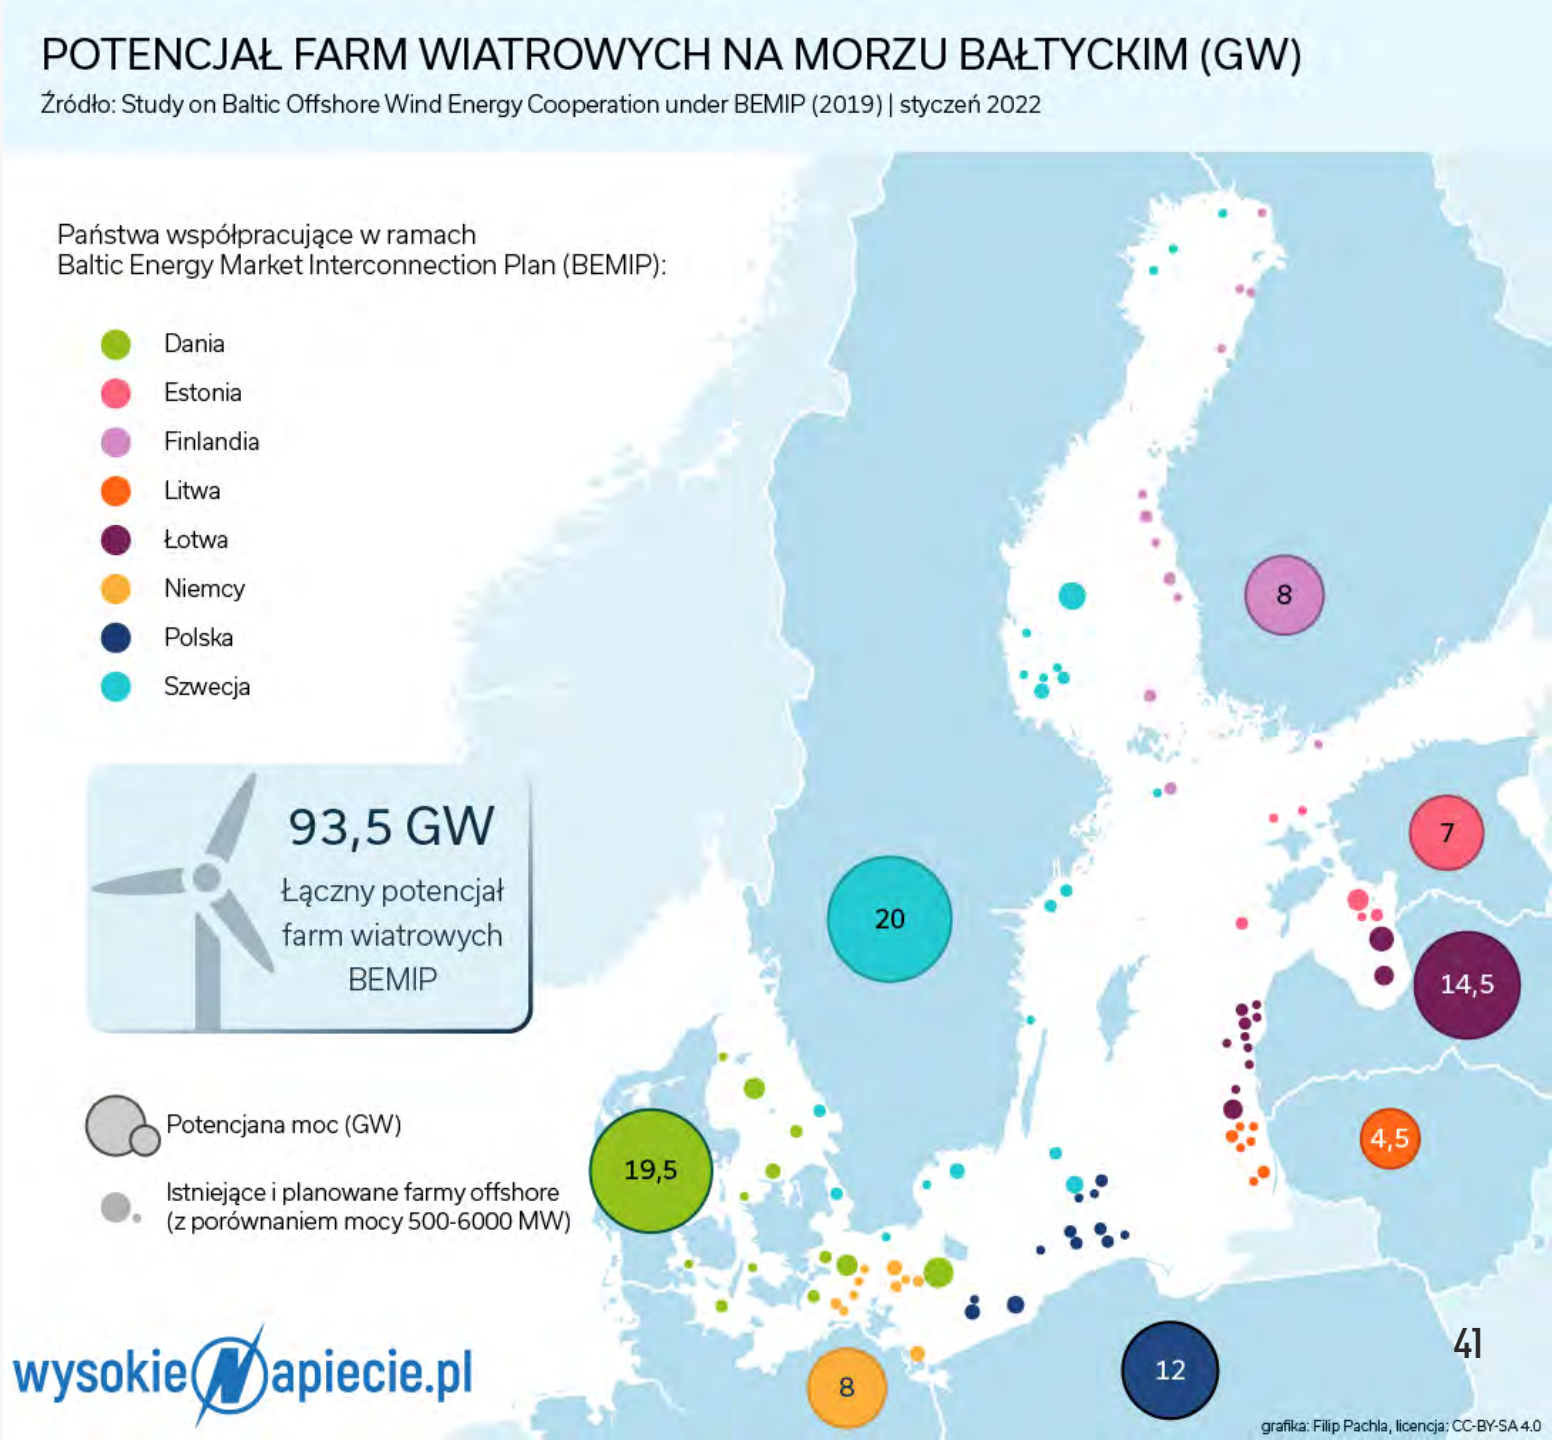
The real potential of offshore wind farms (OWFs) in the Polish Baltic Sea significantly exceeds the assumptions of the Polish Energy Policy 2040 (PEP2040) – reaching up to 33 GW of nominal installed capacity, with an expected average annual energy production of approximately 130 TWh.



The Baltic Sea

According to the European Commission, the Baltic Sea could accommodate as much as 93.5 GW of offshore wind power by 2050.

For comparison - the Bełchatów Power Plant has a capacity of 5.1 GW and produces 18% of electricity in Poland.



Central Port, Gdańsk

New large external port, located on the Gulf of Gdańsk, between the entrance to the internal port and the Northern Port.
The concept and feasibility study include two container terminals, an LNG (Liquefied Natural Gas) terminal, a shipyard and a passenger terminal.

The basin area is almost 1,400 ha, the terminal area - 410 ha.
The length of the breakwater is almost 8,500 m, and the length of the quays - 19,000 m.

DCT Terminal, Gdańsk

Designed by PROJMORS in 2005-2010, the deep-water container terminal is the largest investment of this type, both in Poland and on the Baltic Sea. The terminal's transshipment capacity was 500.000 TEU in the first phase of construction and ultimately 1 million TEU.

2 ship berths with a depth of 13.5 m and 16.5 m on the container quay and a length of 650 m for Postpanamax ships, and a total length of 320 m and a capacity of up to 7,100 TEU, Ro-Ro ramp.

30 ha of storage and maneuvering yards, service buildings.

PROJMORS ASE GROUP

The excavation of the Vistula Spit

The investment includes the construction of a shipping canal, a sheltered port, a new road system with movable bridges, a lock, the construction of an artificial island as well as the construction of a fairway and the reconstruction of the Elbląg River fortifications.

Photo source: NDI SA

Container terminal in the DB port, Szczecin

The project was developed in two stages of investment implementation. Stage I included the construction of a terminal at the Finnish Quay with a transshipment capacity of 120,000 TEU per year, which included the construction of storage yards with a capacity of approx. 2,300 TEU and storage facilities for containers with hazardous materials, electrical, telecommunications and water supply networks.

Stage II involved the design of a railway terminal, including the reconstruction of the track system of the railway siding, a social and office building, a control shelter and a car wash.

Pomeranian Wholesale Center Rënk, Gdańsk

The order included acting as Contract Engineer for the construction of the Pomeranian Wholesale Center in Gdańsk - Barniewice. The investment included over 30,000 m^3 of covered area and 132,000 m^2 of roads, squares and the development of an area of 2.4 ha - a total of 18.6 ha with full installation infrastructure.

Koko Oil Terminal, Nigeria

A new, independent transshipment terminal consisting of a park of 7 tanks for crude oil and a park of 40 tanks for petroleum products. The project also included a two-station transshipment quay for ships, jetties and full media production infrastructure for the terminal to be completely self-sufficient.

Nigerdock Shipyard Lagos, Nigeria

The most modern shipyard on the West Coast of Africa for shipbuilding and offshore structures with a 200 m long dry dock and a 3,000 tone floating dock.

The turnkey project also included large workshop halls, a modern production line, a 150 m long and 6 m deep offshore quay and a paved area for the construction of offshore structures with an area of 18,000 m^2.

ZOELLER TECH HALL,
Rekowo Górne

Zoeller Tech production plant expansion project in Rekowo Górne. On an area of 9.5 ha, a new production hall with a capacity of almost 120.000 m^3 and an area of 8.800 m^2 was designed.

Storage and maneuvering yards with a total area of almost 30.000 m^2 were also built.

Large-scale production plant, Szczecin

It is the largest investment of this type in Poland and one of the largest in Europe.

The project included land and hydrotechnical facilities, including: expansion of the Mazowieckie quay by adding a Ro-Ro ramp, construction of a production hall with a capacity of 1.1 million m^3, a social and office building with a capacity of 22,500 m^3 and a paint shop hall with a capacity of 122,000 m^3.

Hangars for 4 helicopters,
Nowy Glinnik

The project included 4 helicopter hangar buildings with storage and social facilities, 2 garages for auxiliary equipment, a boiler room, a pumping station, a transformer station, a fire tank, access roads and pre-hangar slabs.

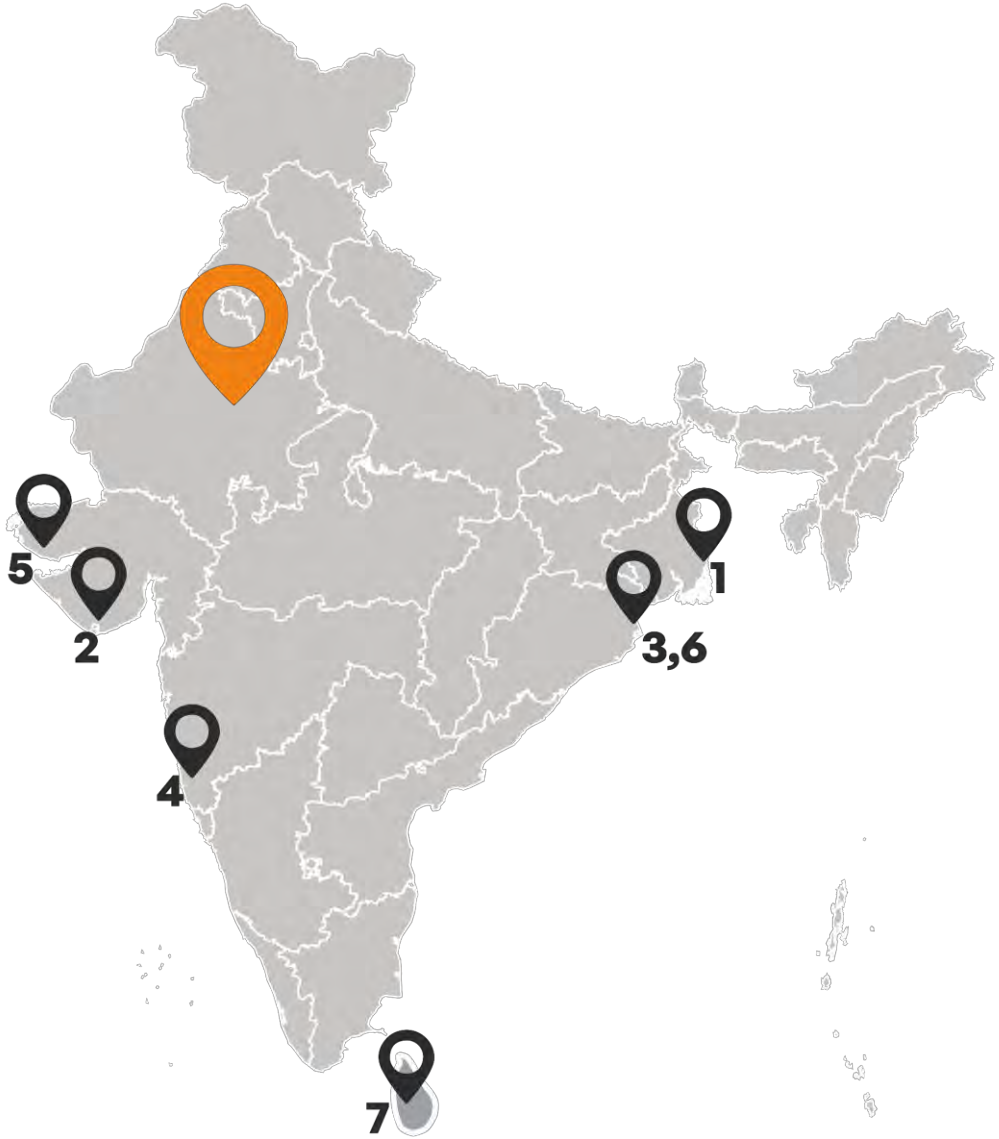
Aparthotel complex, Świnoujście

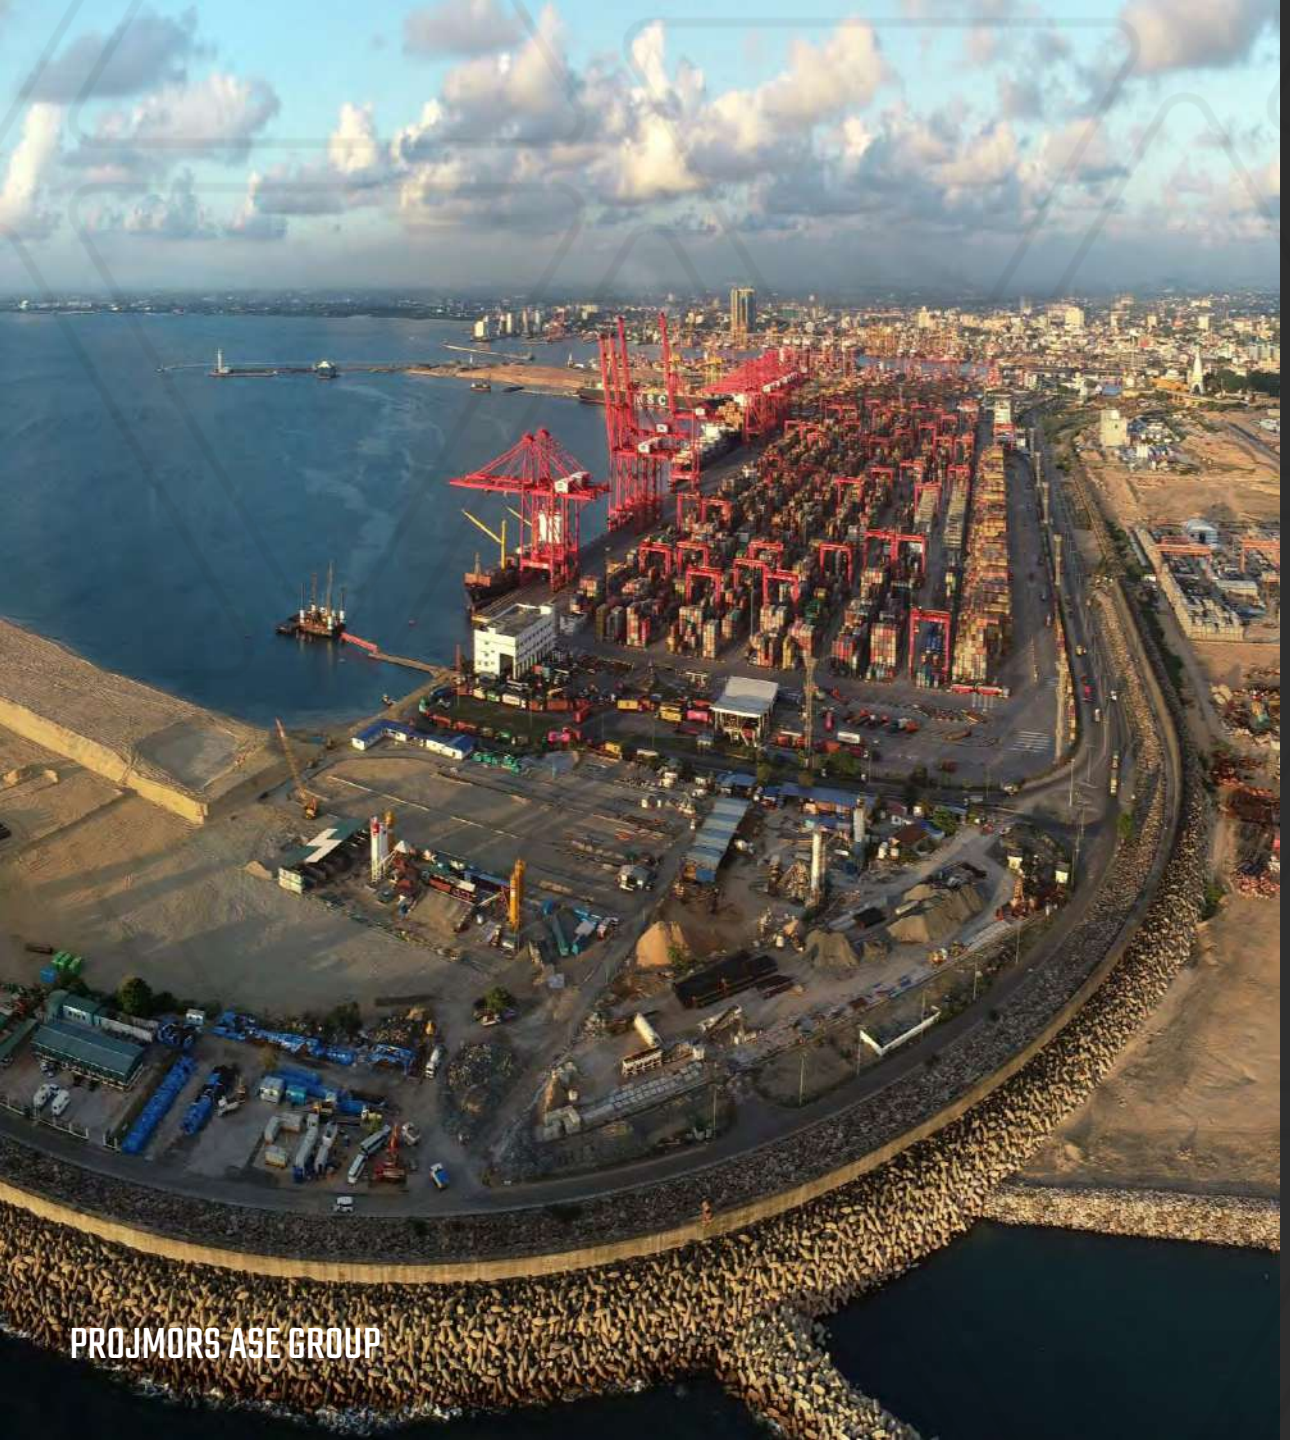
The project consisted of two 5- and 6-story buildings. In addition to the residential part, the buildings have a swimming pool area, fitness center, spa and restaurant.

The project was created in cooperation with ASE STUDIO.

ASE PROJMORS INDIA

1. Design of a sheet pile wall
2. Assessment of port capacity in the state
3. Development of tender documentation for the container terminal in Dhamra Port
4. Detailed design of the infrastructure for the storage yard in Dighi Port
5. Detailed design for the widening of a 2.6 km section of road and a box bridge
6. Detailed design of the container terminal in Dhamra Port
7. Review of the West container terminal project in the Port of Colombo





Project Overview of the Western Container Terminal at the Port of Colombo, Sri Lanka

- EPC Contractor for Quay: ITD Cementowanie
- EPC Contractor for Shipyard: To be appointed
- Design Consultant for
- Shipyard Design Consultant: CGR UK
- Quarter 1400m
- 36 ha. Container Yard with CRMG
- All designs are in line with European and British standards
- The scope of the PROJMORS project review includes all marine works, onshore construction works, water supply and sanitation for dredgers, quay, revetments and container yard.

Tender and detail design for Dhamra Container Terminal, India

- 400 m long berth for servicing container ships with a capacity of 18,500 TEU
- Dredging level -18 mCD.
- 2 access viaducts 40 m long.
- 2 km long defence for reclamation protection.
- 18 ha. container station, including E-RTG station, CFS station and railway station.

The scope of PROJMORS includes all construction works except dredging and reclamation, drainage, water supply and sewage networks.

Planning and detailed design of backup infrastructure at Dighi Port, India

Road network of 4 km, including new roads and widening of existing roads. Area of the gate complex is 6000 m2. Embankment of 24 m height for the road to the tank farm. Storm water, water and sewage network. The scope of PROJMORS includes planning and detailed design of all components in accordance with the port master plan and user requirements.

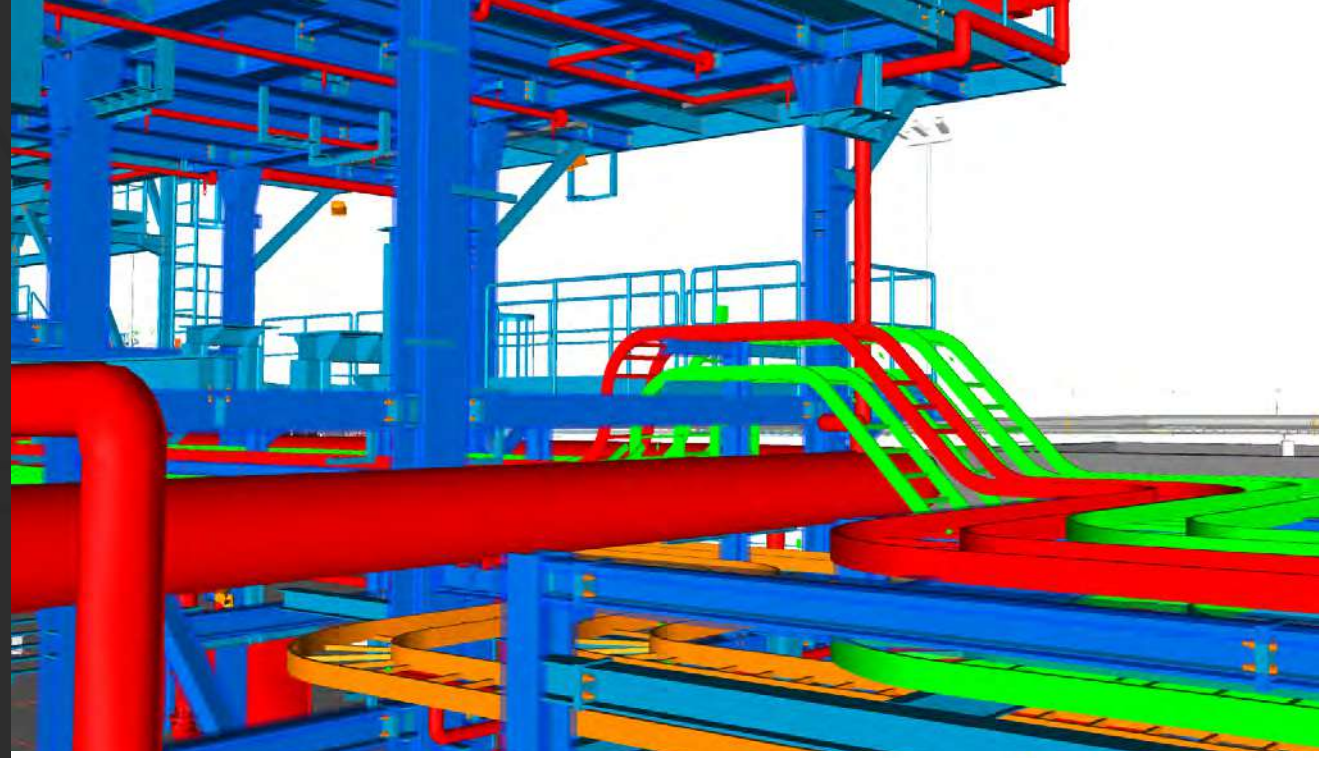
Key clients and partners in India:

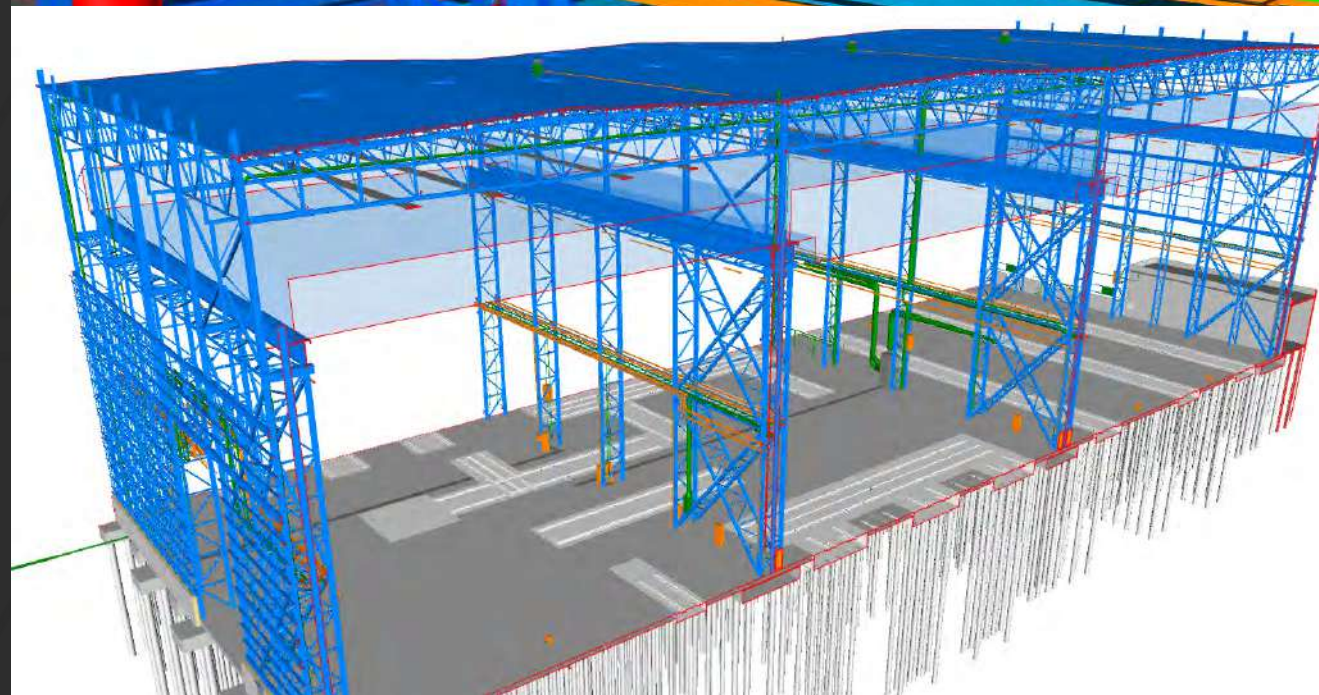
- MAJOR PORT AUTHORITIES
- INLAND WATERWAYS AUTHORITIES
- STATE MARITIME BOARDS
- SHIPYARDS
- INDIAN NAVY
- INDIAN COAST GUARD

BIM (Building Information Modeling)

At PROJMORS we have extensive experience in using the BIM methodology in working on complex infrastructure projects requiring flawless coordination in terms of structure, architecture, MEP and technology.

We prepare multi-discipline models of cubature objects in all industries. Combined with a rich catalog of non-geometric information, they create a useful database for the implementation of construction works and management of the completed facility.





BPR ENERGY
ASE GROUP

BPR ENERGY

New energy for heating and cogeneration

BPR ENERGY, formerly known as Camino Project, is one of the multi-sector companies belonging to BPR ASE GROUP, which provides comprehensive design studies

The company has undergone a transformation from a classic design office into a specialist entity implementing projects in the field of energy and heating, including the use of renewable energy sources.

AREAS OF ACTIVITY

Heating
and cogeneration

Conventional and nuclear energy

Sanitary installations and industrial sewage systems

Our locations

GDAŃSK – OFFICE LOCATION

- Project Information Cards (KIP)
- Public consultations
- Water audits

EKO-KONSULT ASE GROUP:
Sustainable Industry Transformation

EKO-KONSULT's new goals and activities are in line with the European Green Deal policy, which aims to achieve climate neutrality by 2050. The "green" transformation sets the directions for development, investment and the legal framework, creating both new opportunities and challenges.

EKO-KONSULT promotes a modern, conscious industry in which the implementation of business goals takes into account care for the environment and climate.

Using innovative solutions derived from military technologies, EKO-KONSULT focuses its activities on energy transformation - with particular emphasis on the hydrogen industry and renewable energy markets.

75% CO_2 emissions
in the EU comes from the energy sector
– that is why energy transformation is crucial.

Environmental protection
in the enterprise

- Integrated permit procedures
- Post-implementation analyses
- Ecological reviews
- Adjustment programs

Fire Safety

Safety in industry

- Fire safety analysis
- Development of fire scenarios
- Determination of fire protection conditions
- Development of fire safety instructions
- Coordination of the project in the field of fire safety

Explosion Safety

Explosion protection

- Ignition Hazard Assessment for Machines
- Selection of Explosion Protection Systems
- Static Electricity Protection Instructions
- ATEX Audit
- Operation Instructions for Electrical and Non-Electrical Equipment in Ex Zones

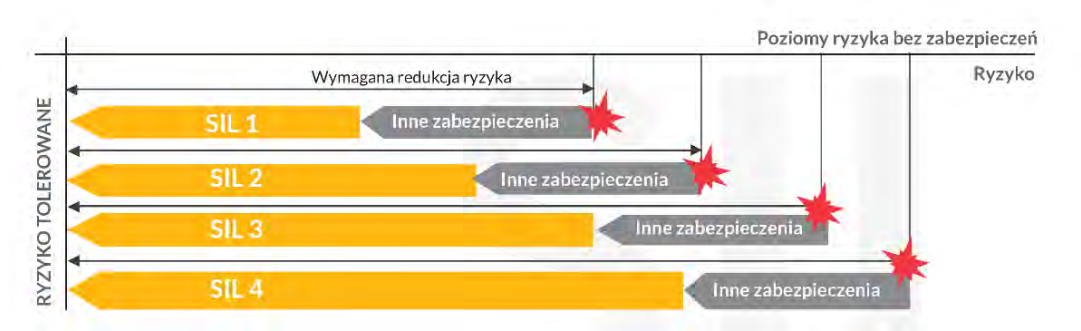
- FMEA/FMECA: Failure Mode, Effects and Critical Failure Analysis

Functional Safety

Functional Safety Management

- Supervision over the implementation of all stages of the safety life cycle according to the requirements of PN-EN 61511:2017
- Determination and verification of SIL levels
- Specification of SRS safety requirements for the SIS system
- Audits of process and functional safety



SECURITY ACADEMY

Certified Training

- Explosion safety
- Process safety
- Fire safety
- Functional safety
- Environmental protection

IECEx recommends the ASE GROUP Safety Academy, awarding it the title of **IECEx Recognised Training Provider**. The international verification body recognises that during the training at the ASE GROUP Safety Academy, the participant will be provided with knowledge in the scope necessary to obtain **the IECEx Certificate of Personnel Competence.**

17 000 trained participants

20 types of training

CERTIFICATION QUALITY

Hydrogen Academy Training

The specialist training cycle begins with an introduction to hydrogen technologies at a **basic level**.

The next stage – **advanced** – discusses general safety principles for hydrogen installations.

At expert levels, detailed technical and technological solutions are discussed, e.g. selection and installation of explosion-proof devices in hydrogen gas atmospheres.

Selected projects

60% less CO_2
green technology

Innovative designs
experience in turnkey projects

Polish production
with comprehensive support for foreign investors

ENERGATE

Characteristic :

- designed by ELMECH Engineers
- produced in our production plant in Pruszcz Gdański
- adapted to the needs and requirements of the Customer:

Basic elements:

Control

Software

Battery

Automation

Active filter

Case

Energy management process

ENER GATE

Energy storage

Energy management

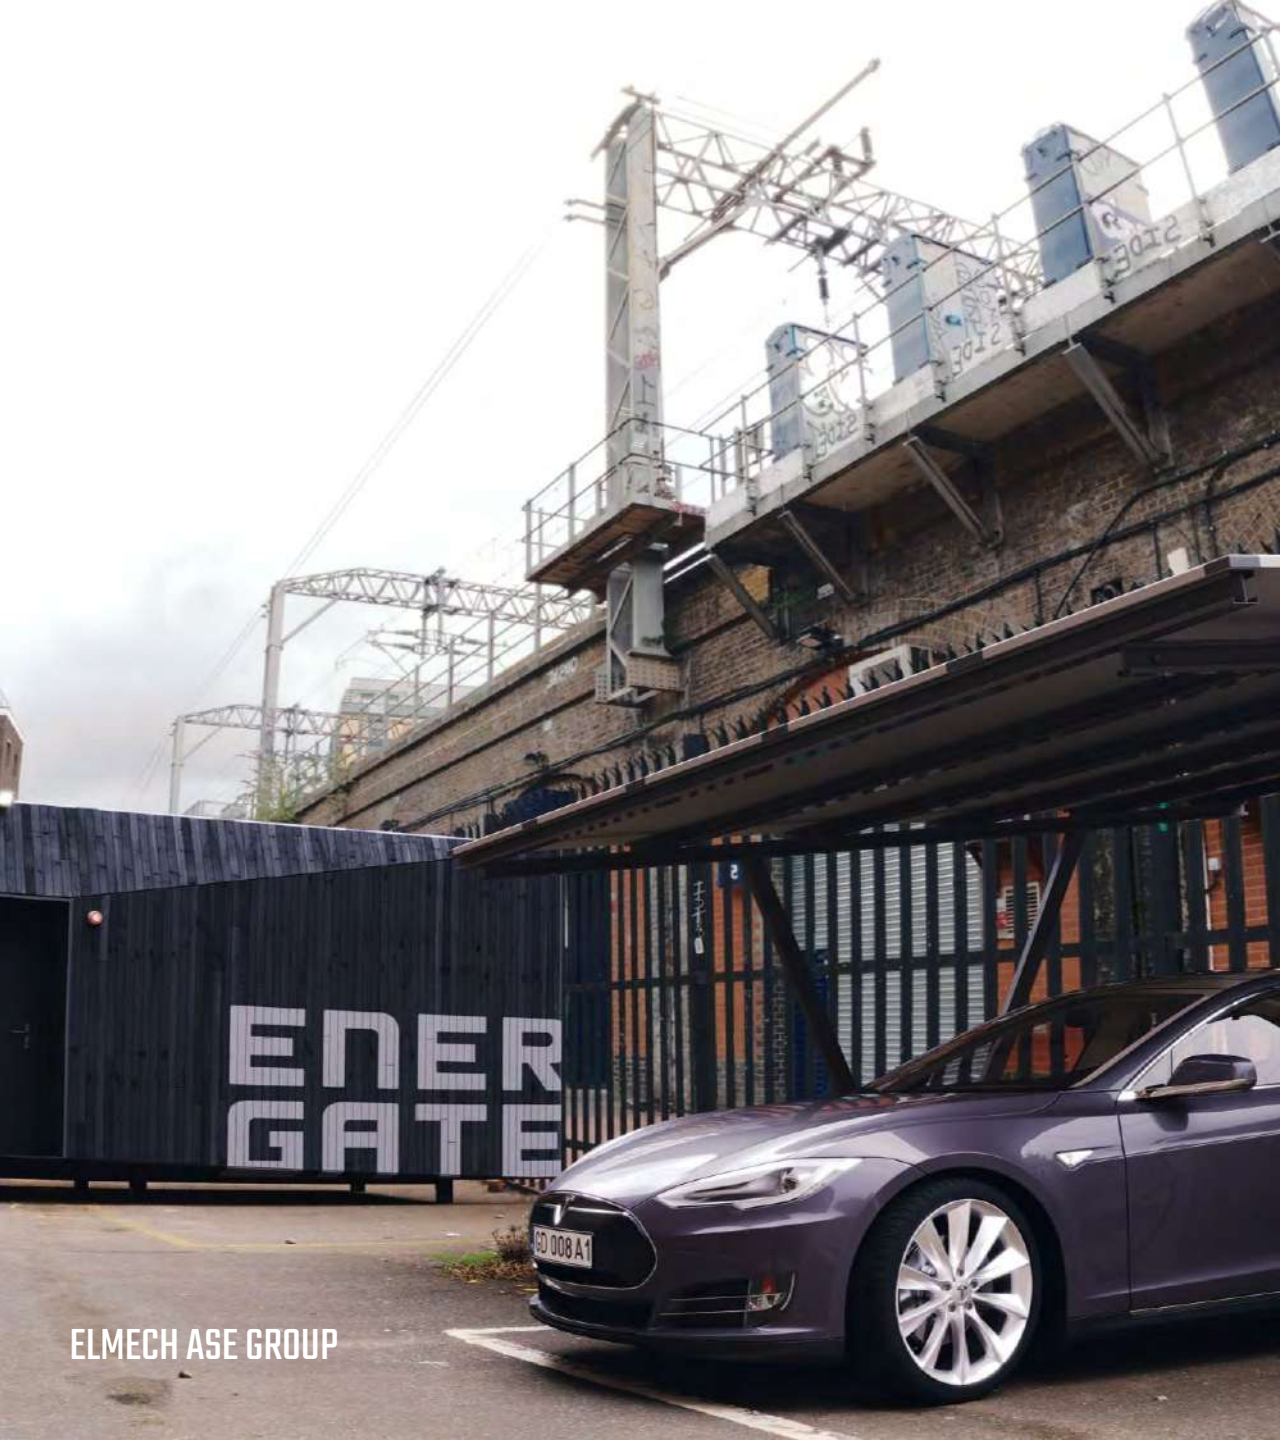
- Purchase
- Consumption
- Production

Improving energy efficiency

- Reactive power
- Power quality

Expected effect

- Financial,
- Technological
- Economic
- Security



Benefits of using energy storage:

- Reduction of energy purchase costs
- Reduction of distribution fees
- Increased consumption of free energy from photovoltaics
- Reduction of electric car charging costs
- No exceedance of ordered power
- Elimination of reactive power costs - active filter

Benefits step by step
For example, 30% lower electricity costs

ENERGATE in Baukrane

ENERGATE in Baukrane

Managing temporary electricity demand

Peak shaving – smoothing out power demand.
We don't draw from the grid, but from energy storage.

Possibility of generating savings by reducing the ordered power.

A penalty is imposed for failure to adhere to the power allocation.

Penalties can reach several thousand per month.

CASE STUDY

ENERGATE

13:35

Odbiory: 137,5 kW
Energia pobrana z sieci: 63,0 kW
Odbiory z sieci: 63,0 kW
Energia ładowania: 0.0 kW
Energia rozładowywania: 42.1 kW
Produkcja PV: 32.4 kW

Działanie systemu w ciągu jednego dnia

ELMECH ASE GROUP

CASE STUDY

ENERGATE

Paint production plant

Energy storage:
- Power 500 kW
- Capacity 450 kWh
- LiFePo4 batteries

Photovoltaic installation:
- Power 350 kWp

Energy management:
- Uninterruptible power supply
- Electrical energy storage
- Power quality improvement
- Reactive energy compensation

CASE STUDY

ENERGATE

Photovoltaic farm

Energy storage:
- Power 11.5 MW
- Capacity 49.45 MWh
- LiFePo4 batteries

Photovoltaic installation:
- Power 145 MWp

Energy management:
- Avoiding negative sales prices
- Auto consumption
- Capacity market
- Full capacity utilization

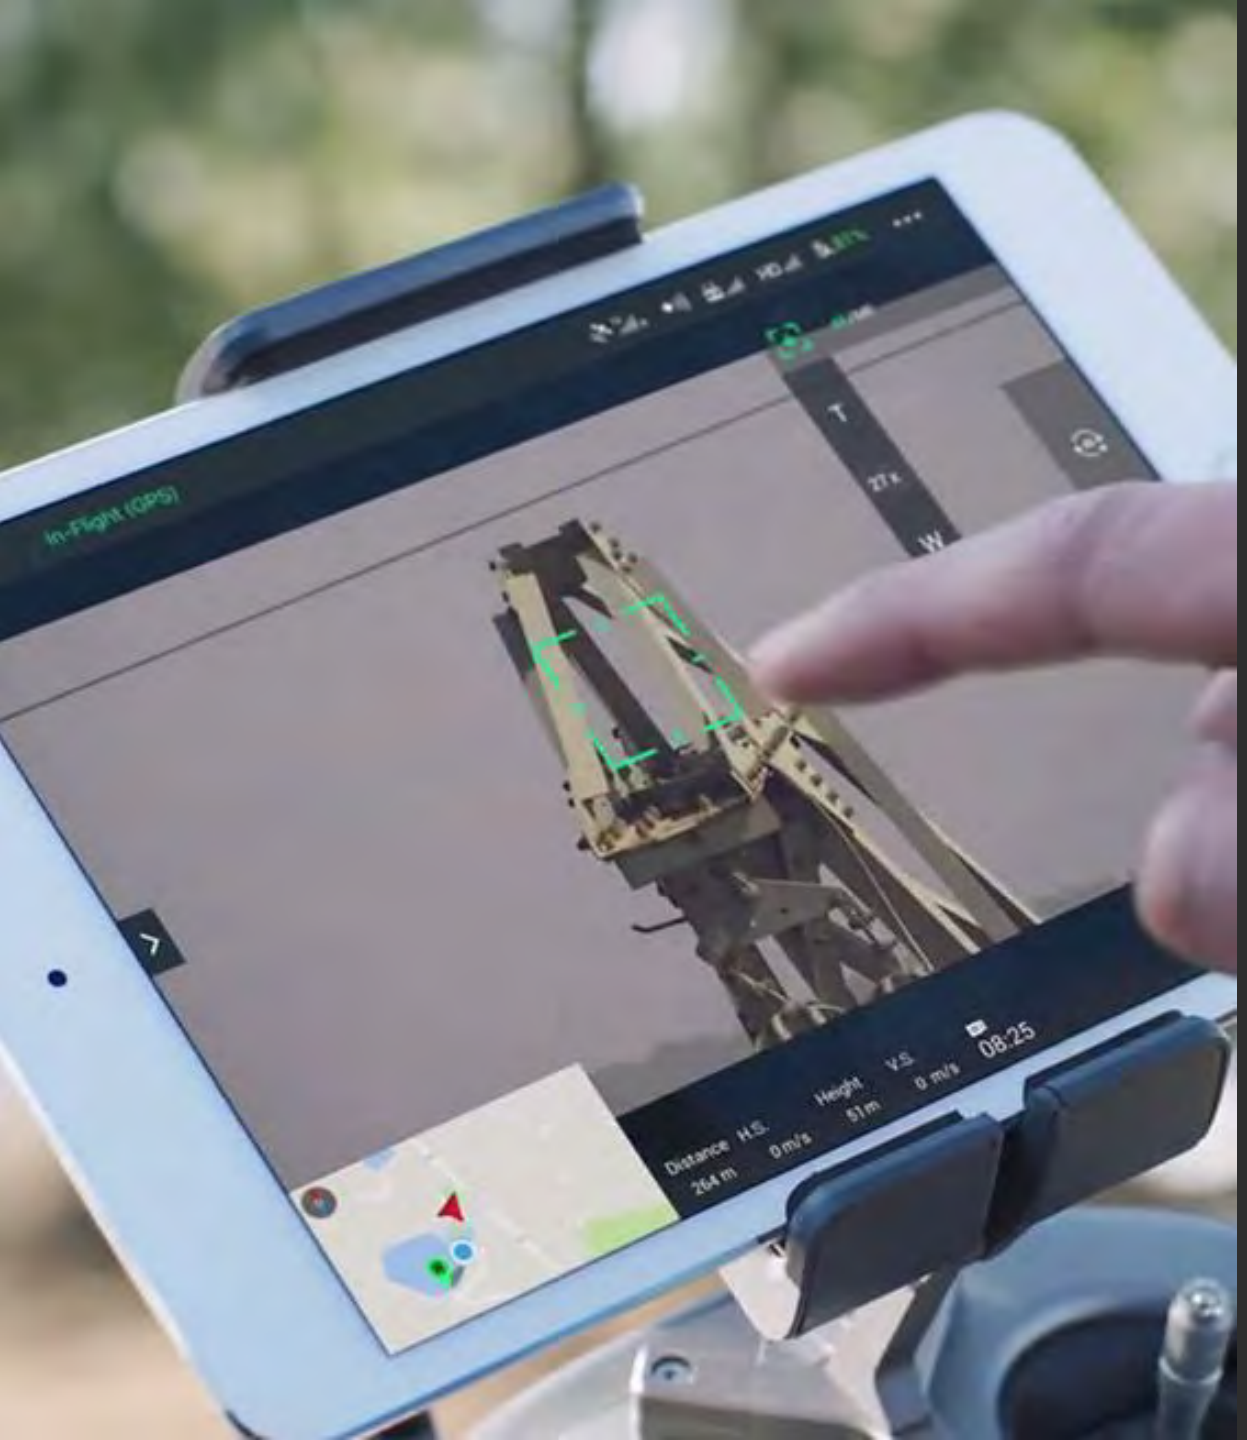
SQUADRON

ASE GROUP

SQUADRON ASE GROUP

We specialize in providing safe, comprehensive products and services in the field of unmanned aviation as well as simulators and trainers.



Areas of activity:

Software production for military needs

Software production

Games and simulations

Applications, e.g. for managing Elmech energy storage

Drones and anti-drone systems

Offshore Wind Farm Simulator

SQUADRON:

- Unmanned aviation experts,
- IT experts,
- Certified instructors and pilots - unmanned aviation operators with military and civilian experience,
- FMV (Full Motion Video) image analysis specialists
- Specialists in geodesy and cartography.

ASE
OFFSHORE

ASE OFFSHORE

Service integrator
for **OFFSHORE WIND ENERGY**

At ASE Offshore, we combine the potential of the most experienced Polish design, advisory and consulting companies specializing in services for offshore wind farms. We originate from ASE GROUP and SMDI Advisory Group.

ASE OFFSHORE

ASE OFFSHORE

MISSION

We create and implement best practices in effective cooperation between the investor, suppliers and stakeholders.

We jointly implement projects that modernize the energy sector in accordance with the ideas of sustainable development.

ASE OFFSHORE Services:

We provide **the highest quality** consulting services for the offshore energy sector, based on knowledge, cooperation and many years of practice.

ASE
STUDIO

ASE STUDIO

Harmonious integration of construction with nature

A division of the BPR ASE GROUP company.
An interdisciplinary team of architects, interior designers, artists, constructors and engineers.

Collaboration:
From the initial discussion about the idea to the design and supervision of its implementation throughout Poland. Specialization in detailed visualizations of interiors and buildings.

ASE STUDIO

Our mission

We design buildings in accordance with ecological standards, integrating with renewable energy sources.

We always take into account the local environment in which our projects will be embedded. We choose natural materials.

We base our philosophy on biophilic design, i.e. the bond that man feels with nature through architecture.
